

Clinical Data Clearinghouse

Intelligently exchange data with providers and payers

Interoperability is still hard, frustrating, and, unfortunately, often lacking. Despite good intentions, government mandates and subsidies, and countless industry standards, the electronic exchange of patient data among healthcare providers as well as between providers and payers is still rare. Healthcare is keeping the fax machine industry alive.

Clinical Data Clearinghouse moves key data among healthcare entities, using the intelligence and flexibility of its hub to overcome the issues which have been keeping the industry from achieving the goals of interoperability. Our solution makes data exchange far more efficient, accurate and actionable.

How we do it

Clinical Data Clearinghouse moves a broad array of data among healthcare entities, including:

Provider-to-Provider

- CCDs, Discharge Summaries
- Admit, Discharge, ER alerts
- Care plan tasks, updates back, due dates
- Direct messages

Payer-to-Provider

- Real-time health summaries to point of care
- Gaps in Care requests

Provider-to-Payer

- Discharge Summaries, Lab data
- Claims attachments
- Problem list/diagnosis details for members
- Feedback on Gaps in Care requests

What you get

- More successful integration, at a lower cost
- For providers, better integration of data with care coordination workflow
- For payers, automation of clinical documentation from providers
