

# Experian's Commercial First Party Fraud Score

---

Commercial entity fraud has always been a pain point for many of our clients and has now become an immediate priority to solve, given the current market dynamics. As digital transformation has accelerated the shift from face-to-face transactions to online transactions, it has enabled fraudsters to take advantage of nascent commercial entity fraud solutions. With the rapid improvement in anti-fraud capabilities in the consumer market, fraudsters are shifting their focus to commercial lending attracted by large loan sizes, lack of sophisticated detection platforms, and an understanding of the relationship between business credit and owner's personal credit. Fraud acceleration and impact have increased the justification of fraud solutions for the industry.

First party fraud is the most prevalent fraud attack impacting our clients and is one of the more challenging types of fraud to identify.<sup>1</sup> A key client pain point that our score will solve for is the need to accurately associate fraud losses that are commonly mis-classified as credit losses. The improved ability to accurately assign fraud losses will also increase the effectiveness of future models.

Current providers of fraud scores are consumer-centric and focuses prediction using consumer credit utilization. Positioning consumer-centric fraud solutions to solve for a commercial fraud problem is ineffective. There are additional fraud signals specific to commercial data, and when combined with consumer data increases our ability to identify fraudulent intent on a commercial application.

We provide an entity First Party Fraud Score, which is a commercial only and blended model to predict entity first party fraud risk and identify early or first payment default and credit bust out scenarios.

## Current market challenges

Clients currently don't know how to properly differentiate between the types of fraud which is needed to apply more prescriptive and proper treatment and controls, to make more specific predictions, and get to decisions more quickly. Specific actions based on the type of fraud provides a more effective approach to replace a one-size-fits-all fraud model.

## Experian's Commercial First Party Fraud Score

There are three different types of application fraud:

### **First Party Fraud (also known as Never-pay, First Pay Default, Bust-out, Credit Abuse)**

An identity is presented to an entity by its actual owner, with intent to steal. This type of fraud is characterized by the high degree of uncertainty when it happens. It is the most prevalent fraud attack impacting our clients and one of the more challenging types of fraud to identify.

### **Third Party Fraud (Identity Theft, Impersonation)**

An identity is presented to an entity by someone who's not authorized (third party) to use the identity. This type of fraud is characterized by the high degree of certainty when it happens.

### **Synthetic Identity**

A type of First Party Fraud where there is no true person to pursue, collect from, or prosecute. An identity is created using different characteristics of real and fake identity elements, which is then used to gain trust through creditworthy behavior.

## Why does Experian excel at detecting First Party Fraud?

Credit data is important, as patterns of increasing use and accumulation of credit are important to detection. Non-credit data is also important. The ways in which identities are used outside of credit give clues to the business and person's lifestyle, stability, and help infer "intent."

First Party Fraud occurs across many obligations at once.

- Experian sees this "cross-lender" view while clients tend to focus on their account-view.
- Experian has observed that generally businesses don't just go bad on an account but accumulate lots of credit and go bad on everything at once.

## Experian's Commercial First Party Fraud Score

## The business challenges our clients use Commercial First Party Fraud Score to solve

We help clients identify application fraud among commercial entities for high risk accounts, to enable an origination process that is faster, less costly, and with less risk.

### Entity Authentication

- Verify that customers are who they say they are and flag customers with potential fraud risk where needed
- Compare customer-supplied details to data from public records and Experian to verify identify of new customer
- Make decision to investigate further or decline the application

### Underwriting and approval

- Assess creditworthiness of customer based on set guidelines
- Minimize risk of overall customer portfolio by limiting credit exposure for potential fraudulent applications

## Commercial First Party Fraud Score:

01

### Blended

Commercial only, consumer only or blended

02

### Refer

300-850 score range and non-Adverse Actionable

03

### Sources

Experian FileOne and BizSource

04

### Delivery

Batch, NetConnect and API Hub

The Commercial First Party Fraud score identifies those accounts that have a higher risk of defaulting. Our machine learned model is a more advanced model with higher performance, providing more matches on small businesses using blended/consumer data on the business owner, and eliminates more false positives. The score helps clients create a more specific refer process during account opening or onboarding, and can also be used for account management. It is based on a 300-850 score range to better understand risk over time (lower score means higher risk), more precisely identifies high risk applications for manual review, and is developed using Experian data with no external data sources. The score is also available via multiple delivery channels for easy integration.

## Experian's Commercial First Party Fraud Score

### Use case example — Abuse and mis-use of credit

Scenario: A recent trend of bad debt from long established businesses or an increase in credit write-offs resulted in incremental losses. Post fraud investigation indicates it might be fraud but still uncertain.

We can help clients identify risk of Credit Bust-Out and First Payment Default in new account openings and within existing portfolios during account review.

- Fraudster applies for credit under their own business. They build a good credit history through timely payments, obtaining credit line increases, and increasing utilization. Then they max out lines of credit, with the intention of not repaying, and drops the account.
- Proper treatment — Handle relationship carefully and limit exposure until you're confident. Limit false positives, provide a smooth customer experience coming through door, and only review high-risk applications with potential fraud.

### Benefits

#### **Reduce Risk for Decisioning through Industry-Leading Commercial, Consumer, and Additional Data Coverage in One Centralized Location**

- Unique data assets with expanded data breadth and depth for better decisioning

#### **Reduce Costs by Replacing Ad-hoc Labor-Intensive Resources with Reliable Objective Data to Evaluate Fraud**

- Consistent and scalable way to approach and identify fraud to reduce fraud analyst workload, by automating the decisioning process based on actionable attribute results

#### **Reduce Risk, Reduce Costs, and Improve Customer Experience by Differentiating Fraud Types to Apply the Right Type of Friction**

- Capabilities to better identify and differentiate between types of fraud to apply more prescriptive and proper treatment and controls, to make more specific predictions, and get to decisions more quickly.
