

PATIENT ACCESS

Patient Access Curator™

Finally, a way to get claims right from the start

Denials don't start in billing — they start at registration. Every health system is fighting the same battle — getting registration data right the first time. But with staff toggling between systems, guessing at coordination of benefits (COB) and chasing missing coverage, it's a losing game. Each missed detail leads straight to denials, rework and lost revenue.

Innovation no other vendor offers

Other products react to denials. Patient Access Curator™ prevents them.

Patient Access Curator doesn't just flag bad data. It fixes and validates it directly in your host system, increasing authorizations and clean-claim rates. That means fewer reworks, write-offs and faster cash, all before billing begins.

This product learns from every interaction, refining COB accuracy and improving how coverage data is matched and verified. It doesn't just identify coverage, it determines who's responsible for the claim and in what order to bill.

This adaptive intelligence sets Patient Access Curator apart.

Patient Access Curator

In seconds, Patient Access Curator checks and corrects:

- Eligibility
- COB
- Demographic information
- Medicare Beneficiary Identifier (MBI)
- Insurance discovery

The result: Cleaner claims. Faster payments. Fewer write-offs. Less frustration for staff and patients alike.

“Our registrars no longer ask, ‘What do I do next?’ Patient Access Curator tells them. And our results prove it right.”

— Randy Gabel, Senior Director of Revenue Cycle, OhioHealth

Average hospital billing (HB) denial data across four Patient Access Curator clients that have been live six months to one year.

Patient Access Curator

Seven fast facts — Patient Access Curator

Capability		What this means for you
1	Five critical validations are combined into one workflow powered by AI machine learning.	Get demographics, eligibility, COB, MBI and discovery wrapped into one single-set solution.
2	All validations are completed in less than 30 seconds.	Patient Access Curator waterfalls across all five tools in seconds, reducing time of manual work.
3	Protect earned revenue.	Bad data is fixed before claims go out, reducing denials, write-offs and contingency fees.
4	Built-in logic proactively finds, verifies and fixes bad data directly and automatically in your host system.	Eliminate the many complex decisions of registrars that can lead to denials; direct integration removes weeks of staff training and disruption.
5	Built-in AI intelligence engine automatically verifies who to bill — and in what order.	Experian Health's proprietary machine learning classifies payer information, predicts plan types, uncovers hidden coverage and perfects COB chaining.
6	Benefit from ongoing optimization.	Experian Health's consulting helps you achieve your denial-reduction goals when your organization is live on Patient Access Curator.
7	Benefit from our security-first design.	Your data is never sent to third-party AI models.
