

# EMV Chip Acceptance Device

Protect, secure, and safeguard your patient payments

Patient payment data requires your vigilance. Beginning in October 2015, healthcare providers became liable for counterfeit fraudulent card purchases. If not already in place, now is the time to equip your organization with state-of-the-art EMV (Europay, Mastercard and Visa)-ready card acceptance devices.

Experian Health has joined with AxiaMed, a leader in healthcare payment processing solutions, to offer the Ingenico iPP320 **EMV Chip Acceptance Device** to clients.

## How we do it

- The compact device is unmatched for adaptability and convenience
- Uses digital end-to-end encryption technology
- Fully EMV and PCI PTS V3.0 certified payment solution is lightweight, stylish and self-contained
- Provides the flexibility to accept any and all existing forms of electronic payment, including MSR credit and debit, EMV chip and PIN cards, store-value cards, contactless systems such as MasterCard PayPass and VISA payWave and mobile NFC-enabled applications
- Plugs into your network via Ethernet connection
- Includes tamper-resistant, tamper-responsive components
- Built on the market-leading Telium2 technology platform and EMV Level 2 kernel with a dual processor architecture

## What you get

**Ensures** customer transactions are fast, private, efficient and secure

**Delivers** the ultimate in secure data transmission and application management

**Fits** neatly into any payment environment with the use of a single cable for flexible adaptation

**Protects** sensitive cardholder data throughout the entire transaction

## Works well with

**PaymentSafe®**, our automated payment processing solution designed to help you collect more revenue, earlier in the revenue cycle, and avoid bad debt, and **Patient Self-Service**, our consumer-friendly, mobile-compatible self-service portal.
