

Experian Pandora™

De-risk your data migration projects

De-risk your data migration projects with Experian Pandora™—a powerful data quality management solution that will help streamline your data migration or data integration project and ensure that it is completed on time and on budget.

Experian Pandora is an on-premise, interactive software tool that works intuitively and effortlessly, encouraging collaboration between users across your organization. Our data quality management solution houses a robust, proprietary database that is self-configuring, self-indexing, and self-optimizing. It is the fastest tool on the market for analyzing, profiling, and transforming your data before a migration.

It's easy to install and intuitive to use—developed with both business and technical users in mind. Migration tasks that typically take hours or even days of effort and rework can be executed in seconds with Experian Pandora.

Benefits of Experian Pandora

Full-volume data analysis

Experian Pandora allows you to proactively profile all of your data—not just a select sample—to identify data challenges or relationships that you may not be aware of.

Unrivaled prototyping

Interactively generate mapping specifications, analyze, and test the migration simultaneously, reducing your project timelines.

Enhanced collaboration

Real-time multi-user collaboration with role-based security permissions allows both technical and non-technical users to work together in the early stages of the project.

Eliminate rework

Save time and money by identifying critical data errors early, eliminating rework that is typically associated with migration projects.

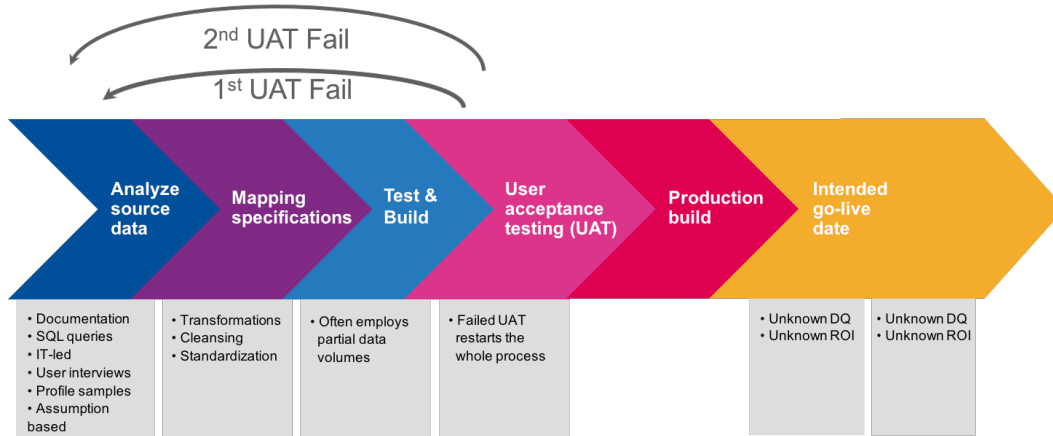

Experian Pandora helps you identify specific data problems with targeted technology, streamlining your data migration project.

How it works

Experian Pandora places the unrivaled control and visibility of data into your hands, and for data migrations, ensures that data being put into the target system meets the needs of the intended application, supporting the ROI of your entire business project.

Our transformation and prototyping functionality allows for smoother consolidation of disparate data environments. Experian Pandora also helps identify and analyze your existing data to ensure only quality data is entering your target system, making the migration or integration project as seamless as possible.
